## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-22, drawn to a method of manufacturing a thin film transistor, classified in class 438, subclass +1.
  - II. Claims 23-24, drawn to a thin film transistor, classified in class 257, subclass 59.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the semiconductor device can be manufactured by a different manufacturing method as that claimed by Applicant. For example, the thin film transistor can be manufactured by impurity diffusion in the semiconductor region, instead of implantation.
